Education

Ateneo de Manila University Expected May 2028
Bachelor of Science in Computer Science with Specialization in Data Science and Analytics DOST Scholar
Relevant coursework: Information Management (SQL), Pattern Recognition (machine learning in Python)

Philippine Science High School, Main Campus 2018 – 2024

Awards & Honors

Codeforces Expert (peak rating 1672), **670 problems** solved across **31 rated contests** on Codeforces and AtCoder
3rd of 60 teams, OpenAI Build Week Community Buildathon Manila (2026)
Finalist, UP ACM Algolympics (2026)

Leadership & Experience

Ateneo Management Information Systems Association (MISA) Oct 2026 – Present
IT Skills & Development Officer, eServices
- Lead a **4-person** dev team building an invoicing system for a logistics client: assign tasks, run client communication, and report to the two MISA associate VPs overseeing the project.
- Delivering the MVP of a system that replaces manual retyping of a hand-kept spreadsheet into invoices, with automatic storage-fee math, container-number validation, double-billing prevention, and PDFs in the client's format.
- Built the app foundation (Next.js, TypeScript, Convex), staff sign-in, and a GitHub Actions pipeline that tests every PR and auto-deploys to Vercel and Convex.

Computer Society of the Ateneo (CompSAt) Mar 2026 – Present
Training Deputy (Oct 2026 – Present); Learn-2-Dev Trainer (Mar 2026)
- Curate the problem sets for Code Royale, CompSAt's programming contest, and coordinate the Learn-2-Dev trainers.
- Taught React fundamentals as a Learn-2-Dev trainer over a **6-week** program: wrote walkthroughs, live-coded examples, and debugged participants' code.

Programming Varsity of the Ateneo (ProgVar) Oct 2024 – Present
Member
- Train weekly in algorithms and data structures and compete in ICPC-style contests; best placement **260th of 10,344** (top 3%) in a Codeforces Div. 2 round. @RamenNagi on Codeforces and AtCoder.

Projects

Yardshtick | *Next.js, TypeScript, TailwindCSS, OpenAI API, Convex* | Live | GitHub Jul 2026
- Built the seller and buyer web app that turns one photo of a pile of objects into editable garage-sale listings and a shareable storefront, with copy and prices drafted through the OpenAI API.
- Coded the frontend against a shared service interface, so UI work ran on a mock while teammates built the AI pipeline.
- Rendered live scan output over uploaded images, including bounding boxes, polygons, and per-item metrics, and gave failed scans explicit error states instead of a blank screen.

Portfolio Site | *Next.js, TypeScript, TailwindCSS, Neon Postgres, Vitest, Vercel* | kenazc.com | GitHub Jul 2026
- Built a keyboard-driven portfolio on the Next.js App Router that pulls live ratings, contest history, and solved counts from the Codeforces and AtCoder APIs, falling back to static content when either is down.
- Stored projects and contest results in Neon Postgres and served them through ISR, so new data reaches the live site in under a minute with no redeploy. Tested with Vitest in CI.

Project Sinag | *Next.js, Nitro, Prisma, PostgreSQL, TailwindCSS, shadcn/ui* | Live 2025
- Built with Team McCoders at a hackathon, from idea to a working full-stack demo inside a **24-hour** window, with a Nitro backend and Prisma over PostgreSQL for type-safe queries.

Technical Skills

Languages: TypeScript, JavaScript, Python, SQL, C++, Java, HTML, CSS
Frameworks: React, Next.js, Node.js, TailwindCSS
Data & Tools: PostgreSQL, Prisma, Convex, Git, GitHub Actions, Vercel, Vitest
